

ERASE BROWN & RED SPOTS

If you spend a lot of time outdoors, which many in San Diego and the surrounding areas of Southern California tend to do, your skin can be dramatically affected. Common signs of sun damage include rough, dull texture, fine lines and wrinkles, brown spots, visible blood vessels, and diffuse skin redness.

An IPL photofacial can address all of these issues. Just like going to the dentist for a teeth cleaning is necessary to keep your teeth healthy and white, regular IPL treatments keep your complexion radiant and youthful. The IPL treatment can also be combined with other laser treatments for even more effective results.

IPL photofacial combined with PicoWay® for skin rejuvenation

IPL for chest rejuvenation

With 80+ treatment options, 60+ laser and light devices, and 5+ proprietary procedures, our board-certified dermatologists can provide natural-looking results for every skin type and concern using treatments backed by science.

IPL PHOTOFACIAL

TRUST YOUR SKIN TO THE
DERMATOLOGY EXPERTS

THE BEST IN IPL PHOTOFACIALS

An IPL treatment uses high-intensity pulses of light to penetrate the skin and trigger your natural healing process. The device can target multiple skin concerns in a single treatment. We offer the latest IPL devices at Cosmetic Laser Dermatology including the all-new Stellar M22™. All IPL devices are not the same. The M22 and Stellar IPL devices are the safest and most effective on the market. They can treat virtually any skin type because of their patented Optimal Pulse Technology which is ONLY found on the Lumenis® IPL machines.

The Stellar M22 is highly effective in treating pigmented lesions and sun damage with powerful, short pulses and integrated cooling between pulses to reduce the risk of skin damage.

At Cosmetic Laser Dermatology, we don't just say we are IPL experts - we back it up with facts. Our founder, Dr. Mitchel Goldman, helped develop the first intense-pulsed light device for treating common skin issues, and six of our dermatologists have been involved in numerous research studies involving IPL. Our team has more experience using IPL devices than any other practice in the country.

IPL photofacial for redness/rosacea

AM I A CANDIDATE FOR AN IPL PHOTOFACIAL?

The Stellar M22 IPL can treat the following skin concerns:

- Pigmented lesions
- Fine lines and wrinkles
- Unwanted hair
- Vascular lesions
- Rough skin texture
- Spider veins
- Large pores
- Rosacea
- Skin irregularities
- Sun damage
- Melasma

IPL photofacial for brown spots

Downtime: You may experience redness, skin irritation, mild burning, and swelling for a few hours after treatment, but these side effects should not require significant downtime.

Results: Results are noticeable after a single treatment.

Duration: When used for skin rejuvenation, regularly scheduled treatment sessions once or twice a year will help you maintain your positive results.

WHAT IS AN IPL TREATMENT LIKE?

The Stellar M22 IPL treatment is usually a quick process. A typical session takes 10 minutes or less, making this an ideal option for a lunch break treatment.

The Stellar M22 IPL treats a variety of conditions with a single handpiece. Because it equally distributes energy during each pulse, you benefit from a safer, more precise, and more comfortable treatment. Continuous cooling throughout your procedure further decreases discomfort, protects your skin, and saves time while ensuring an optimal outcome.

This device is safe and effective for all types of skin. It is the only IPL device that can be used safely on darker skin tones. It is particularly effective at removing vascular lesions across all skin tones, while minimizing the risk of skin damage, texture changes, burning, and scarring.

This non-invasive treatment allows for an immediate return to your daily activities. You will likely experience redness, skin irritation, mild burning, and swelling for a few hours after treatment, but these side effects should not require significant downtime.

Results are noticeable after a single treatment. We recommend professional skincare, available right in our office, to help you maintain your skin's health and prolong the positive effects of your treatment.
