

PPP What to expect after your procedure

Beginning the evening of OR the morning after your procedure:

- Wash the treated area gently in the shower, using your hand and gentle antibacterial liquid soap.
- Cleansing should be done 1-2 times daily, preferably A.M. & P.M.
- After cleansing, apply a thin layer of ointment (Aquaphor, Bacitracin or Vanicream Oint.). There should always be ointment on the treatment surface. To ensure this, check the area several times a day to be certain the ointment is in place.
- Continue this regimen until the area is healed.
- If you are uncircumcised, make sure the foreskin is always covering the treated area.

DO NOT ATTEMPT TO PICK OR PEEL THE SKIN FROM THE TREATMENT SURFACE
